Proximity Credentials

The ISG's Proximity technology offers your facility an easy and convenient access control solution. Proximity technology, which operates on 125 kHz frequency, is easily integrated into existing legacy proximity systems, and is ideal for new installations.

Offered in several different form factors, the ISG has the Proximity Credentials to fit your needs:

- **Clamshell Cards** - Highly durable and more rigid than the typical credit card making it ideal for tough environments.
- **ISO Cards** - Similar in size and thickness to a credit card and has the ideal surface for printing custom artwork, images and photographs for identification.
- **Key Fobs** - Easily attaches to any key ring for convenience.
- **PVC Adhesive Patches** - Can be adhered to any frequently used surface.

Proximity Credentials by the ISG are compatible with all industry leading proximity readers and are ISO compliant. With ISG™ Proximity Credentials, there is little wear and tear on the cards ensuring a longer card life. There are many Weigand bit formats used today. The ISG offers one of the broadest ranges of bit formats, with over 20 available. ISG member dealers are experts in providing you with the correct card for your needs.
